Notes on drug prices:

Prices are based on:

- The prevailing price held by the NHSBSA Dictionary of Medicines and Devices (dm+d)
- Where the prevailing price for a product described in its generic form is that of a POM, the list price of a widely available P or GSL licensed product is used for payment purposes.
- Where a product is available as a licensed medicine and a CE device, the price is based on the licensed medicine and that is the version that must be supplied under this scheme.
